=====

EXECUTIVE SUMMARY

AI/ML Engineer with 4+ years of hands-on experience building scalable deep learning systems, LLM fine-tuning pipelines, model quantization (LoRA / GGUF), RAG architectures, and C++/CUDA performance acceleration. Passionate about stoic engineering and robust system design.

EDUCATION

B.Tech in Computer Science & Engineering

JECRC University, Jaipur, India | 2022 - 2026
Specialization: Artificial Intelligence, Machine Learning & Neural Architectures

CORE TECHNICAL SKILLS

AI & Deep Learning: PyTorch, Transformers, LangChain, Autograd Tensors, RLHF, RAG
Programming Languages: Python, C, C++, CUDA, JavaScript, SQL, HTML5 / CSS3
Systems & DevOps: Linux (POSIX Shell), Docker, Git, GitHub Actions CI/CD
Data Science & Web: Pandas, Scikit-Learn, Matplotlib, React.js, Next.js

PROJECT HIGHLIGHTS

- 1. LLM Parameter-Efficient Fine-Tuning Engine**
 - Engineered custom LoRA & QLoRA quantization pipelines for 7B+ parameter open-source LLMs.
 - Reduced GPU VRAM memory overhead by 65% while maintaining benchmark task performance.
- 2. CUDA-Accelerated Tensor Matrix Multiplication Kernel**
 - Developed custom low-level C++/CUDA kernels for high-throughput parallel linear algebra execution.
 - Achieved 3.4x latency speedup over naive host CPU memory execution.
- 3. Roots of Gratitude â Interactive Skill Tree Visualizer**
 - Built high-definition 8K Stoic tree interactive portfolio dossier in Next.js & Framer Motion.
 - Implemented real-time drag-and-drop node alignment and persistent state telemetry.

CERTIFICATIONS & ACHIEVEMENTS

- 28+ Active Open Source AI Repositories on GitHub
- Open for AI Consulting & Research Collaborations (2026 Active)
